

Best New Wireless Technology: The Peerless-AV HD Flow.

By: Gary Kayye, CTS

This is a very creative niche for wireless that every AV integrator should check out as it allows you to wirelessly send VGA, HDMI (HDCP compliant), audio and component audio (H.264) to one, two, three or four receivers up to 130 feet. The concept for Peerless-AV is that you can have an HD monitor mounted with no wires to deal with behind the TV (other than power). And since it sends out a signal to up to four receivers, this is a perfect wireless digital signage system solution.
